## Summary of the prototype

Our final prototype brings together the best parts of our individual designs into one simple, easy-to-use interface. Isaiah added clear navigation and a sign register feature for secure login, Marius introduced a color change feature to make the design more engaging, and Jupiter created a clean, organized layout to simplify user interactions. As a team, we made sure the design looks consistent throughout and combined our unique strengths to build a balanced final product that is responsive, accessible, and easy to use.
